http://danielbreen.net/projects/

Physics PhD with focus on modeling and data analysis. Analyzed real world neural system data obtained from collaborators. Applied parameter estimation techniques. 2+ years experience and proficiency using python and in core collaborative roles with other research groups.

Experience

UC San Diego — **La Jolla, CA**
Graduate Research Assistant — *August 2014– 2017*

- Scraped recipes from foodnetwork.com, discovered ingredients characterizing ethnicity of cuisines using wordclouds, lda topic modeling, and deployed app online using flask and heroku.
- Developed and applied methods of probabilistic inference to estimate parameters for dynamical models of neurons.
- Analyzed, visualized statistical patterns in estimated parameter sets, and emulated a biological neuron on neuromorphic silicon VLSI chip.
- Used random forest model to identify features differing between Alzheimer's diseased and healthy cells, and identified model mechanisms underlying these features.
- Core roles in two collaborations with experimentalists. One collaboration resulted in a conference paper and poster at bioCAS 2016, invitation to publish in TBioCAS (only 1% from bioCAS are invited), and posters at SfN and an MBI workshop. From the other, a paper is in progress. Python 'scratch' notebook available at my website.
- 2+ years experience with Python, basic familiarity writing and editing C++, CUDA, R, and SQL.

Education

- **UC San Diego** — **La Jolla, CA**
  PhD in Physics, GPA:3.6 — *2011–2017*
- **UC San Diego** — **La Jolla, CA**
  MS in Physics, GPA:3.6 — *2011–2013*
- **New Mexico Tech** — **Socorro, NM**
  BS in Physics — *2007–2011*

Programming Languages

- **Proficient:** Python
- **Basic:** R, SQL, Git, Command Line, C/C++, CUDA
